

# Critical Care Drugs

While any prescription drug may be critical to a patient's care, Critical Care Drugs are high-cost drugs that may have few or no alternatives for equivalent treatment and that are used to treat conditions like certain cancers, enzyme disorders, and HIV. The list of Critical Care Drugs is updated every calendar year but does not change during the year. The HOP Pre-65 Medical Plan with prescription drug coverage pays 50% of the cost for Critical Care Drugs after the \$350 deductible is met (up to a maximum participant copayment of \$100 per 30-day prescription).
